

GRAINTEC

NEW CAPACITY STANDARDS

EWOS NORWAY SETS NEW CAPACITY STANDARDS FOR SALMON FEED EXTRUDER LINE CAPACITY

EWOS Norway has recently completed a major capacity upgrade of the Florøe Factory in order to meet the increasing demand for salmon feed in the market.

GRAINTEC was selected as the main process supplier responsible for design, engineering and installation of a batching, grinding and mixing facility and the extruder line.

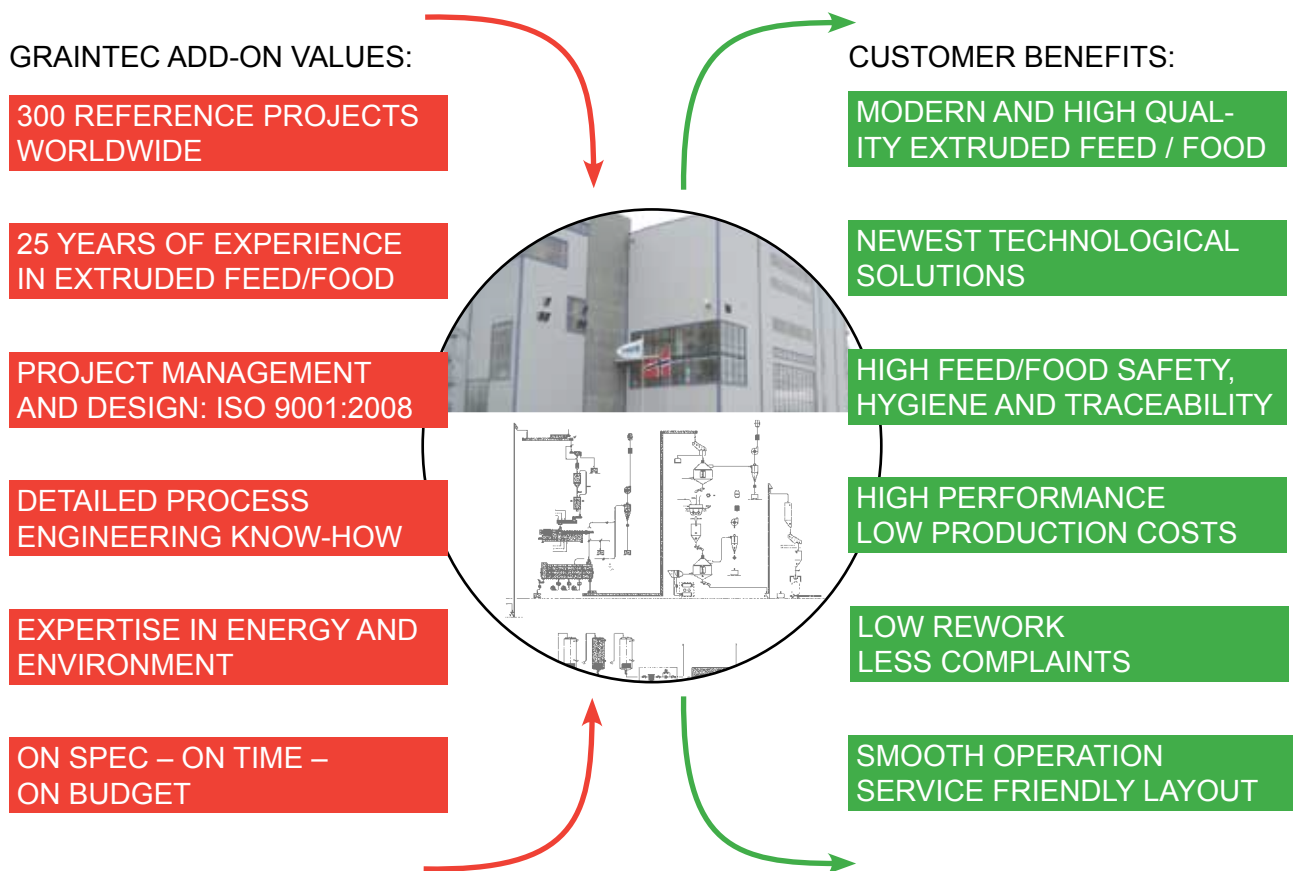

The extruder line capacity sets new standards for what is possible to achieve in terms of finished product output capacity on one line. After testing and fine tuning the line capacity is now above 30 tons/hour and 35 tons/hour seems to be reachable.

This is a remarkable capacity and makes this fish feed extruder line the largest one in the world.

In order to reduce operational cost various installations are included such as energy recovery from process air, automatic recycling of fines and water from the process as well as recycling of air in order to reduce the environmental impact on the surroundings.

Mr. Atle Kvist, Operations Director of EWOS, confirms that he was very satisfied with the performance and cooperation with GRAINTEC on this project.

EXTRUDER PROCESS PLANT – DESIGNED AND SUPPLIED BY GRAINTEC

GRAINTEC supplies processing plants and lines mainly for manufacturers of fish feed and pet food.

We offer a full range of assistance during construction of a processing plant or individual line from initial design and preparation of a master plan for final installation and introduction of the plant and training of the staff.
